

THE VIRTUAL ASSISTANT

Four tools that integrate EHS management

The toolkit for workflow success:

CAPA - Hold employees accountable by automating the creation, notifications, follow-up, and management of action.

Document Center - Stop wasting paper on policy manuals no one reads. If it's important, it should be online, and our EHS management system software makes it easy.

Scheduler - Scheduling on our EHS management software system ensures you meet important compliance deadlines with scheduled recurring reminders.

Insights - Ensure your audits and training are completed on time while also displaying incidents, audits, actions, and training reporting metrics at a high level.

The perfect addition to our many EHS management tools.
